ABOUT COMPANY

Remik Seed Private Limited is focused on research & development, production, processing & marketing of seeds for India's farming fraternity

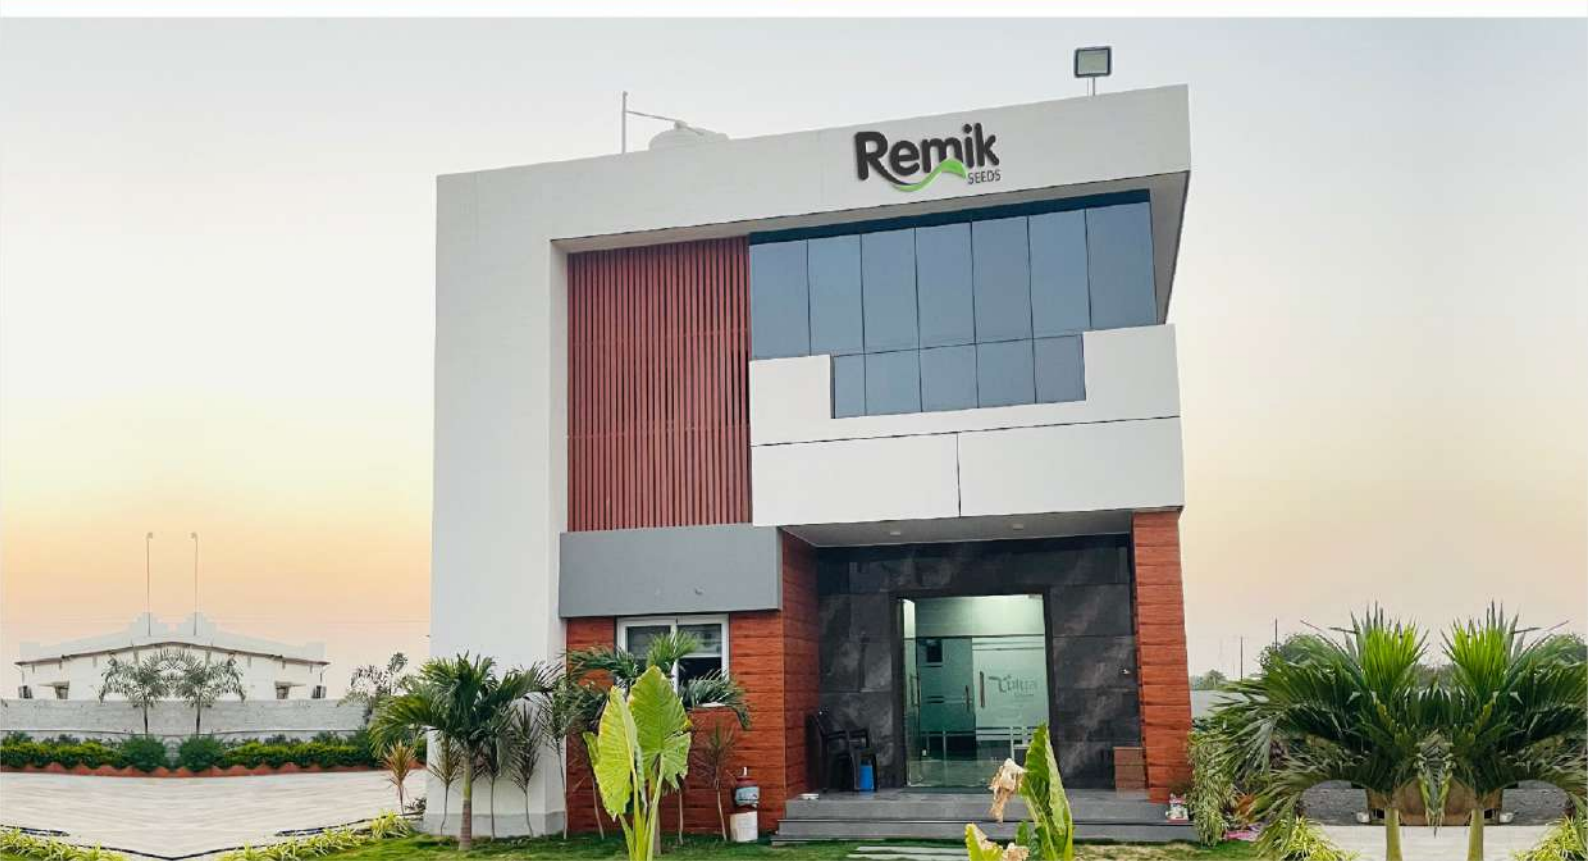

VISION

Innovativeness and incorporation of new technologies for simplified and eco-friendly farming for better productivity, adaptability and sustainability of crops is the Vision of Remik Seeds. We hope to achieve this by the interplay of three invaluable principles, constant and dedicated efforts and an uncompromising attitude towards quality of the product and being responsive to needs of the Indian farmer.

MISSION

To bring the best of science in to the farmer fields. It is the socio-economic vision of the company to empower the farmers with the best of seeds to enhance the agricultural productivity of the world. We act as a trusted partner to our farmers throughout their entire value chain by adding value in seeds product.

Quality seeds at affordable price"Committed to provides superior quality seeds at affordable price to strengthening our farmers with best innovation and technology.

UNIQUENESS

WHO WE ARE

We are an agriculture seed company that serves farmers while facing the climate change and global food security challenges

WHAT WE DO

We provide farmers with high quality seeds through innovation and local expertise to ensure the farmers profitability and sustainable agriculture

WHERE WE WORK

We operate in R & D, Seed production, Marketing for best quality with wide range of crop

HOW WE DO IT

We deploy the most advanced technologies in traditional plant breeding and build close relationship with local farmers and growers

OUR STRENGTH

- We have fully qualified team having more than 20 year experience in seed industries in production, R&D & marketing
- We have two High-tech seed processing unit at Rajkot & Botad with capacity of 250 MT seed processing per day with storage capacity 700 MT at a time
- . We have well equipped seed testing laboratory with technician team
- We have 12 acre R & D farm at Ahmedabad, Himatnagar, Rajkot, Gondal & Gadu for breeding program and testing innovative hybrid to assess their performance.
- We have office cum depot at Ahmedabad, It can better serve to our customer
- We have wide product range which can fees Indian farmer needs.

TOMATO

Remik 1068

Crop: **Hybrid Tomato**

Plant Habit: Semi Indeterminate and vigorous plant

Fruit type: Oval shape, Medium sized, attractive red colour with Very Firmness of fruit

Fruit weight 90-100 gm with 6-7 mm rind thickness

Big fruit with high firmness

Days to first harvest 60-65 days after transplanting

Tolerance to Blight, TLCV virus tolerance & with stand with high temperature

Suitable for long transportation & table purpose

Very high yielding variety

Remik Khatta

Crop: **Hybrid Tomato**

Desi Sour segment

Good firmness

Determinate plant type

Shoulder having light green colour

Tolerance to TLCV

Fruit weight 80-90 gm

Good heat set

High Yield variety

Remik 1058

Crop: **Hybrid Tomato**

Plant habit: Determinate and vigorous plant

Fruit shape: Oblate round shape, Medium sized, attractive red colour with Very Firmness of fruit

Good firmness

Fruit wt. 80-90 gm with 5-6 mm rind thickness

Days to first harvest 50-55 days after transplanting

Tolerance to Blight, TLCV virus tolerance & withstand with high temperature

Suitable long transportation & table purpose

High Yielding variety

Remik Berry

Crop: **Hybrid Tomato**

Fruits are small round dark red colour with fruit weight 30-35 gm.

Cherry grow with brushes, each of which forms from 20 to 35 fruits.

The whole brush ripens at the same time.

Tomatoes have a sweetish flavour.

The trunks of the plant are strong, slightly leafy. Each leaf is small, dark green.

Children especially love these tomatoes because of their small size.

You can use it both fresh and after processing

Remik Sweet Scoop

Crop: **Hybrid Tomato**

Growth habit: Semi determinate

Earliness: 50-55 days

Fruit Shape: Round | Fruit Colour: Red

Firmness: Excellent Firm

Av-Fruit Wt: 80-90 gm

Major USP's: TLCV & high temp tolerant, High bearing, Excellent for Long Transportations, High yielding, Long shelf life, Uniform fruits Size

Remik Delicious

Crop: **Hybrid Tomato**

Earliness: 50-55 days

Fruit Shape: Slight fat round

Fruit Colour: Deep Red

Firmness: Good

Av- Fruit Wt: 80 -90gm

Major USP's: TLCV & Heat tolerance, High bearing, Excellent for Long transportations, Uniform fruit size, Good shelf life.

Remik Appetizer

Crop: **Hybrid Tomato**

Plant habit: Semi determinate

Earliness: 60-65 days

Fruit Shape: Square round

Fruit Colour: Deep Red

Firmness: Excellent Firm

Av- Fruit Wt: 90-100 gm

Major USP's: Excellent TLCV& Heat tolerant, Good shelf life and

Transportability, High yielding.

Remik Oval Sweet

Crop: **Hybrid Tomato**

Plant habit: Semi determinate

Earliness: 65-70 days

Fruit Shape: Square round

No. of fruits/ cluster: 5 – 6

Fruit Colour: Deep Red

Av- Fruit Wt: 100-110 gm

Major USP's: High Yielding, Good fruit quality and uniform cluster size, glossy red fruit colour, Good rejuvenations, TYLCV, HT & early blight.

CHILLI

Remik Devanshi

Crop: **Hybrid Chilli**

Days To First Picking 55-60 Days

Fruit Length 12-14 Cm

Fruit Diameter 1.2 Cm

Fruit Surface: Semi Wrinkle,

Fruit Colour: Parrot Green

Pungency: Medium To High

Ripen Colour: Dark Red

Tolerance To LCV

Remik kashmiri

Crop: **Hybrid Chilli**

Days To First Picking 55 – 60 days (Green) 85-90 days (Red)

Suitable for both purpose

Plant height: 3.5 to 4 feet

Fruit length: 10-12 cm

Fruit Diameter: 1.6 cm

Fruit surface: semi wrinkle

Fruit colour: Green

Pungency: Medium | Ripen colour: Dark Red

Tolerance to Anthracnose

Remik Sarkar

Crop: **Hybrid Chilli**

Days To first picking 40-50 days

Fruit length 10-12 cm

Fruit Diameter 2.5-3 cm

Fruit surface: Smooth

Fruit colour: Dark Green

Pungency: Medium

Ripen colour: Light Green

Tolerance to LCV, Heat tolerance

Remik Red spice

Crop: **Hybrid Chilli**

Thin long fruit

Dual purpose hybrid for fresh green & Dry market

Plant feet 3.5 to 4 feet

Fruit length: 12-16 cm

Fruit surface: smooth and shiny

Fruit colour: Red & Green

Pungency: Medium to high

Ripen colour: Dark Red

Tolerance to LCV

Remik Durwasha

Crop: **Hybrid Chilli**

Growth Habit: Semi erect

Leaf Colour: Green

Fruit Orientation: Pendent

Fruit length (cm): 9-10 | Fruit Diameter (cm): 0.9-1.0

Immatured fruit Colour: Dark Green

Matured fruit colour: Deep Red

Fruit Surface: Slightly wrinkled

Major USPS: Tolerant to CMV and CVMV, High Rejuvenation, High yield

Remik Chatkaz

Crop: **Hybrid Chilli**

Days To First Picking 40-50 Days (Green) 90 days (Red)

Plant Habit Erect

Fruit Color Parrot Green

Fruit Length 1.7 cm

Fruit Diameter 8-10 cm

Pungency Pungent

Disease Virus Resistant, anthracnose tolerance

Remark: Green & Red (dry) Purpose

Remik Right Up

Crop: **Hybrid Chilli**

Days To First Picking: 50-55 Days

Plant Habit: Erect

Fruit Color: Green

Fruit Length: 6-8 cm

Fruit Diameter: 1.2 cm

Pungency: Highly Pungent

Disease: Virus Tolerant

Remark: Upward Bunch, green purpose, heat tolerance

Remik Spicy Knife

Crop: **Hybrid Chilli**

Plant Habit: Tall Erect Spreading plants

First Picking: 50-60 days after transplanting

Fruit Colour: Yellowish Green (parrot Green)

Fruit Length: 15 - 16cm

Fruit Diameter: 1-1.2 cm

Pungency: High Pungent Fruit

Disease: Virus Tolerant

Remarks: Wider climate adaptability, wrinkled fruits good for

fresh market

PEPPER

Remik Italian

Crop: **Hybrid Pepper**

Suitable for Open field and net house

Fruit shape: Green Blocky with 4 lobe

Fruit having good keeping quality

Thick skin and good for transportation

Plant Height: 3 to 4 feet | **Fruit weight:** 100-120 gm

Ripen fruit colour: Green | **Fruit surface:** semi wrinkle,

Fruit colour: Green | **Ripen colour:** Dark Red

Tolerance to LCV

Remik Bella Veg

Crop: **Hybrid Pepper**

Plant: Dense And Strong

Fruit Shape: Square

Fruit Color: Shiny Green

Fruit Length: 8-10 Cms | Fruit Diameter: 4-5 Cms

Fruit Weight: 90-100g

Maturity: 60-65 Days After Transplantation

Specialities: Suitable For Long Distance Shipping, Blocky Fruit With 4 Lobes, Suitable For Open & Protected Cultivation (under Polyhouse & Nethouse)

Remik Blocky - Y

Crop: **Hybrid Pepper**

Plant Habit: Erect Medium Tall

First Picking: 65-70 days after transplanting

Fruit Shape: Round blocky with 4 lobes

Fruit Colour: Green turns Yellow

Fruit Weight: 140-160 gm

Remark: High yielder, Good tolerance for insect pest & diseases.

Remik Rubic

Crop: **Hybrid Pepper**

Plant Habit: Erect Medium Tall

First Picking: 65-70 days after transplanting

Fruit Shape: Round blocky with 4 lobes

Fruit Colour: Green turns red

Fruit Weight: 140-160 gm

Remark: High yielder, Good tolerance for insect pest & diseases.

BRINJAL

Remik Shlok

Crop: **Research Brinjal**

Fruit are attractive purple colour small in size

Plant is vigours with profuse branches

Calyx are not spiny green in colour

Fruit weight is 90-150 gm

Fruits are very testy with less seeds.

Fruit acceptance in all the market

Remik Subhra

Crop: **Research Brinjal**

Fruit are long with attractive green purple colour strip

Plant is non spiny vigours with profuse branches

Fruit weight is 120-150 gm

Fruits are very testy with less seeds.

High yield

Tolerance to wilt disease

Remik Vegan

Crop: **Research Brinjal**

Erect bushy Plant having profuse leaves

Fruit are big attractive green in colour with slightly oval shape

Fruits are in solitary bearing

Fruit having 35 gm to 50 gm size

Fruit pulp are white soft & tender

Fruits having less number of seeds

Fruit having long pedicel length

Fruits having good in test and aroma

Bumper yielding variety | Tolerance to wilt disease

Remik Dev

Crop: **Research Brinjal**

Fruit are oval shape with green colour

Plant is non spiny vigours with profuse branches

Fruit weight is 150-180 gm

Fruits are very testy with less seeds best for Bhartha making

High yield

Fruits having good in test and aroma Bumper yielding variety

Tolerance to wilt diseases

Fruits having good in test and aroma Bumper yielding variety

Tolerance to wilt diseases

Remik Utsav

Crop: **Hybrid Brinjal**

Erect bushy Plant having profuse leaves

Fruit are big attractive purple in colour with slightly round shape

Fruit having 150 gm to 220 gm size

Fruit pulp are white soft & tender

Fruits having less number of seeds

Good for making Bhartha | Fruits having good in test and aroma

Bumper yielding variety

Tolerance to wilt disease

Remik Black Dolla

Crop: **Research Brinjal**

Days to First picking after transplanting: 50 – 60 days

Fruit weight: 40 – 50 gm

Fruit length: 15-20 cm

Mature Fruit Colour: Shiny Dark Purple

Fruit Shape: Long composite fruit

Picking Quality: Good

Cluster variety

Remik Purple Pride

Crop: **Hybrid Brinjal**

Days to First Plucking: 60-65 days after transplanting

Fruit weight: 60-80 gm

Fruit length: 15-20 cm

Mature Fruit Colour: Greenish Purple With light green strip

Fruit Shape: Oval Round

Tolerance to wilt disease

Remik Rosey Spine

Crop: **Hybrid Brinjal**

First Shape: Oval

Fruit Colour: Purple with White Strips Fruit

Weight: 60-70 gm.

Calyx Green with Spines

Attractive fruit color with better retention in summer

Eye catching fruits with prominent Spines

CAULIFLOWER

Remik Jugnu

Crop: **Hybrid Cauliflower**

Sowing time: August to November

Types: Superior Quality

Mid early hybrid curd weight 1-1.5 kg

Uniform curd weight

Curd is compact with self blanching

Self blanching leaves which gives snow white curd

Spacing 2 ft x 2 ft

Remik Minty Cook

Crop: **Hybrid Cauliflower**

Days to Maturity: 75-80

Plant Habit: Erect | Leaf Colour : Dark green

Curd shape: Dome | Curd colour: Snow white

Avg. curd weight (gm): 1500-2000

Curd Compactness: High | Avg. Curding Temperature :15-24°C

Special Characters/USP's : Good blanching and wide adaptability
• Attractive white curd • Good uniformity with high plant to curd ratio
• Excellent for temperature or cool climate

Remik White Spread

Crop: **Hybrid Cauliflower**

Days to Maturity: 50- 55 | Plant Habit : Semi erect

Leaf Colour: Green | Curd shape: Dome

Curd colour: Creamish white

Avg. curd weight (gm): 600-800

Avg. Curding Temperature : 20-27°C

Special Characters/USP's : Early maturity, wider adaptability
• Attractive creamish white curd, high yielder

Remik Violet Watch

Crop: **Hybrid Cauliflower**

Days to Maturity: 190

Plant Side: Large

Leaf Colour : Dark green

Curd colour: Purple

Avg. curd weight (gm): 1100-1200

Early maturity

Curd Compactness: Very Good

CABBAGE

Remik Ball

Crop: **Hybrid Cabbage**

Sowing Time: June To Decmber

Type: Superior Quality,

Maturity days- 50-55 after transplanting,

Average ball weight- 1 kg, ball is compact,

green color, very hard with good test,

Field holding capacity is 25-30 days,

Sowing Distance- 1.5 X 1 ft. sowing season -Rabi

Special Characters/USP's: • Early maturity • Tolerance to black rot

Remik Leafy Pastie

Crop: **Hybrid Cabbage**

Days to Maturity :55-60

Plant Habit : Small

Head Shape: Round

Head Colour : Bluish green

Avg. Head Weight : 800-1000 gm

Compactness: Compact

FHA/FHC > 20 days

Special Characters/USP's:• Early maturity• Tolerance to black rot

Remik Critic Veggie

Crop: **Hybrid Cabbage**

Days to Maturity : 50-55

Plant Habit : Small

Head Shape : Round

Head Colour: Green

Avg. Head Weight : 600-800 gm

Compactness : Compact

FHA/FHC> 20 days

Special Characters/USP's: Extra Early maturity • Tolerance to black rot

Remik Iconic

Crop: **Hybrid Cabbage**

Days to Maturity: 70-75

Plant Habit: Medium large

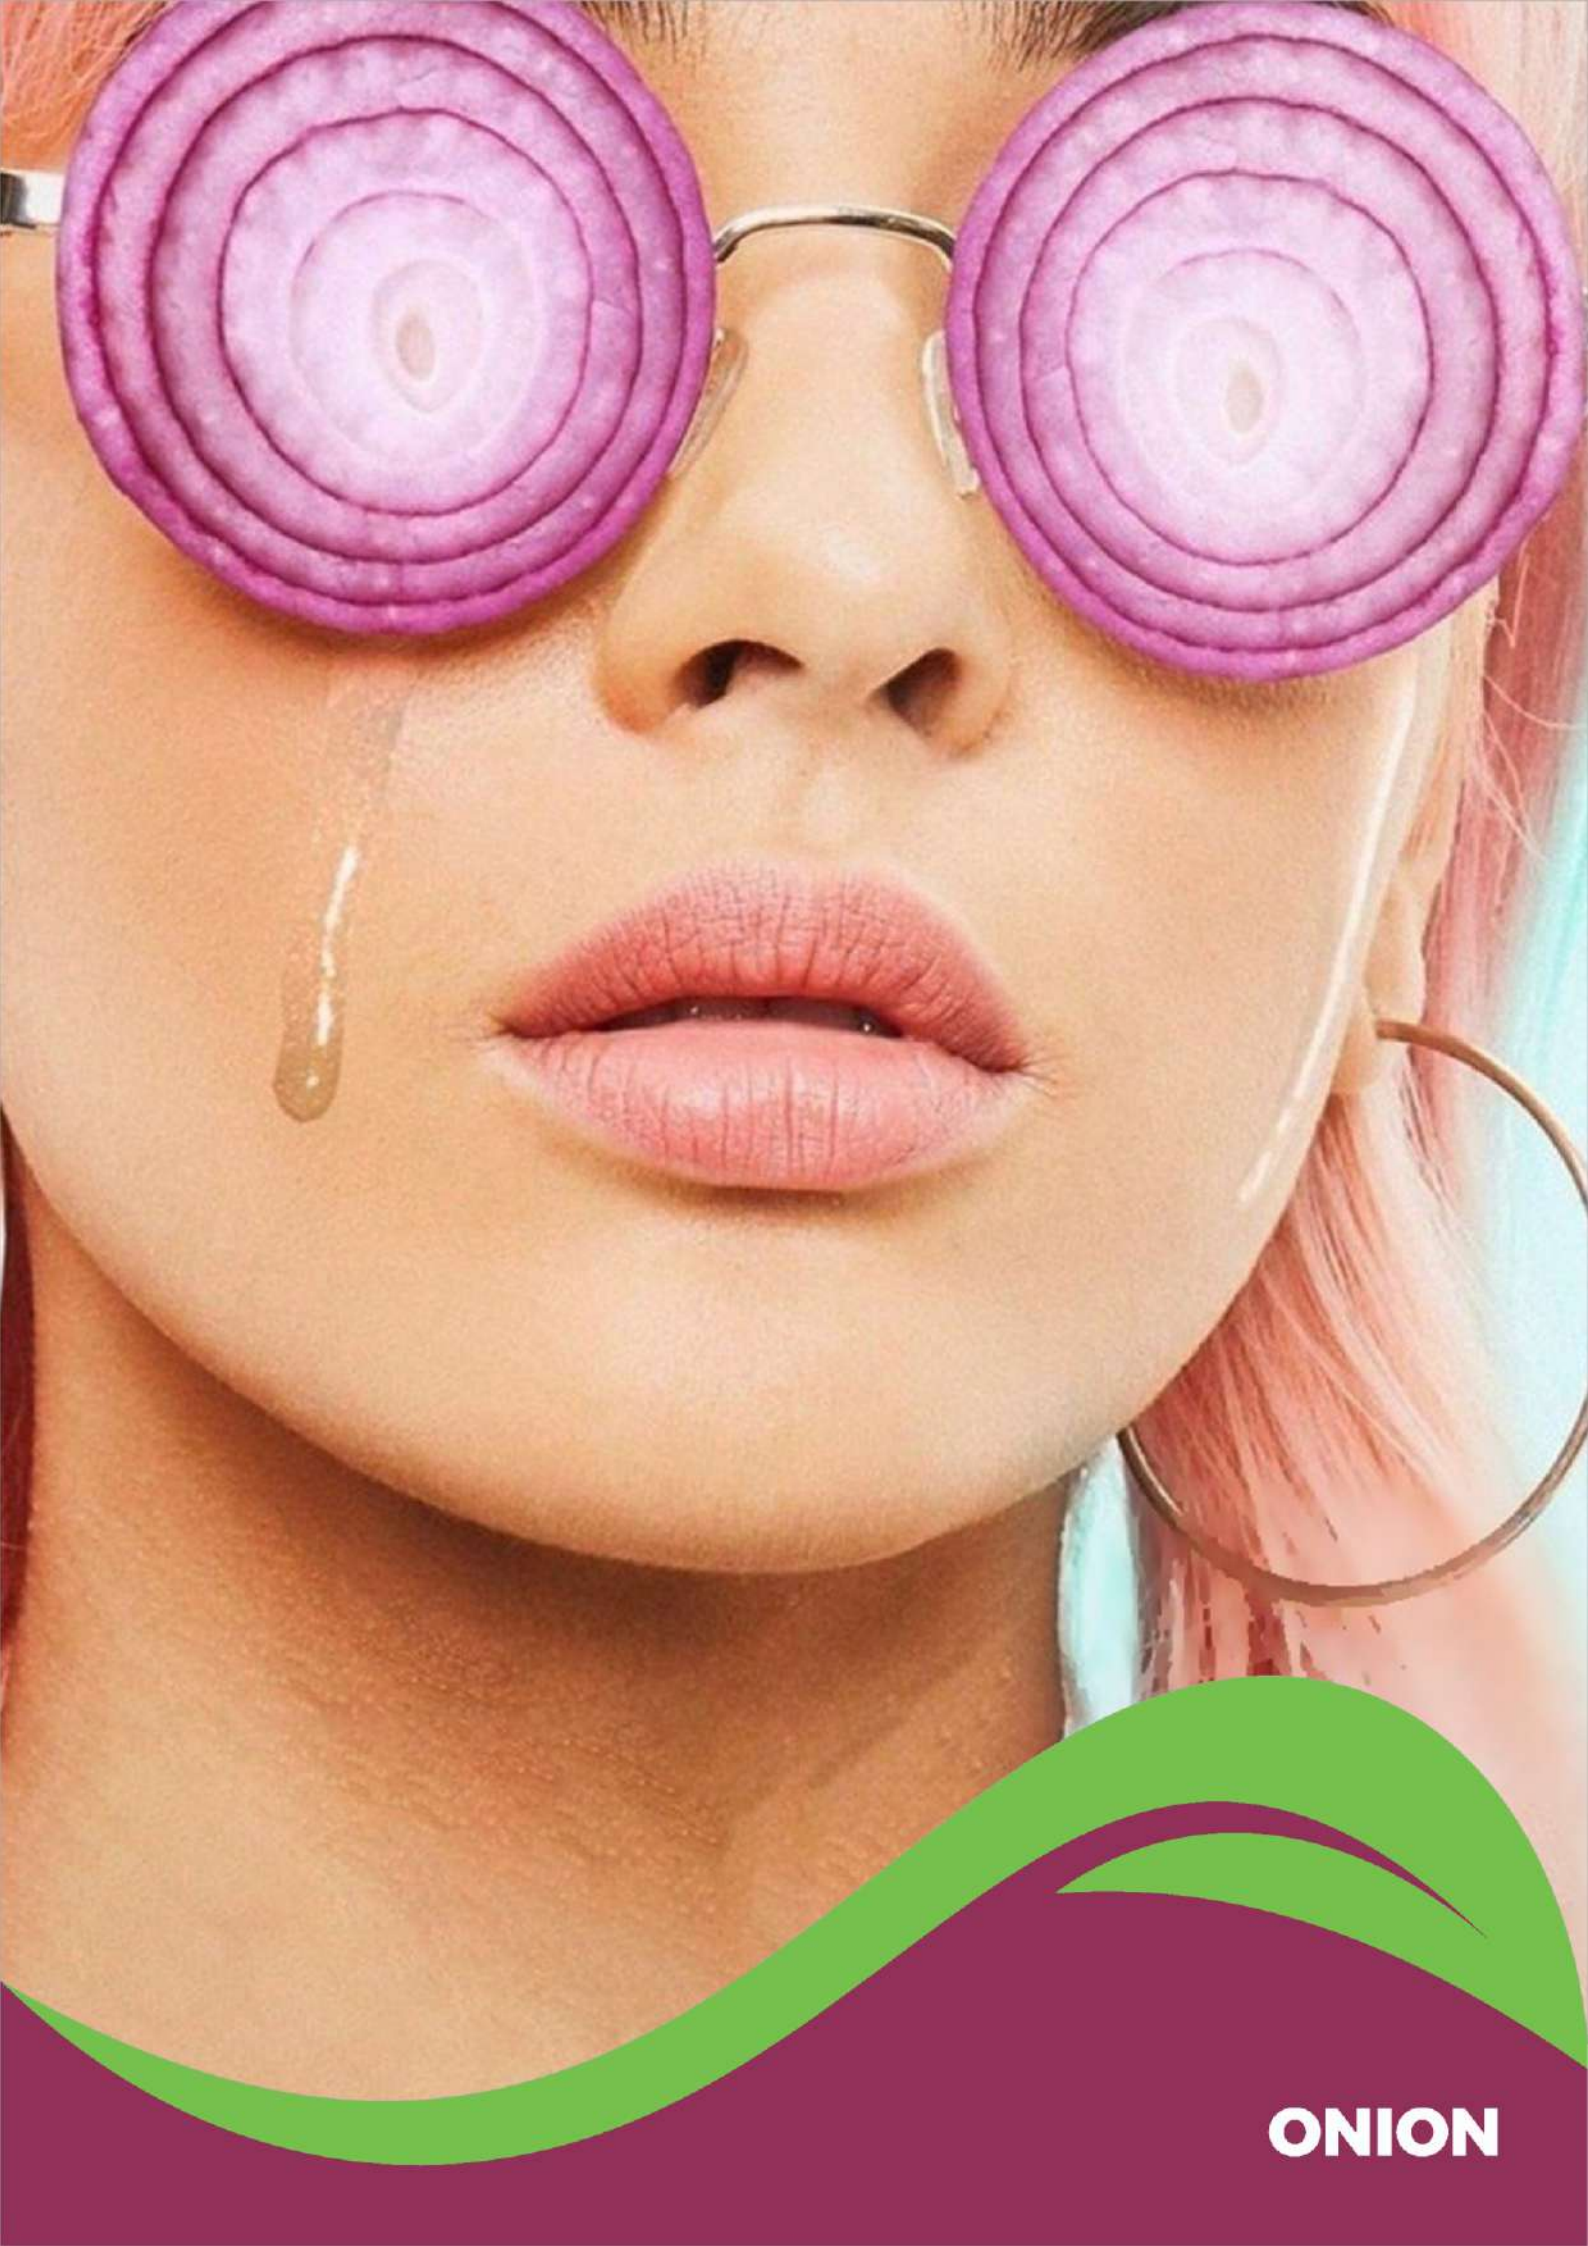

Head Shape: Semi round | Head Colour: Bluish green

Avg. Head Weight (gm): 1400-1600

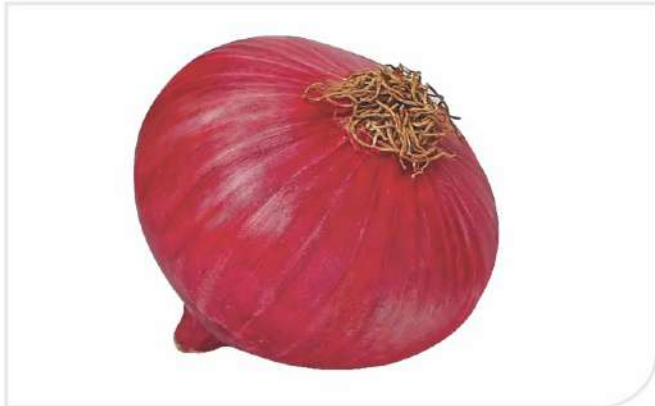

Compactness : Excellent

FHA/FHC (Days) >30

Special Characters/USP's: • Uniform maturity, attractive heads
• Tolerance to black rot

ONION

N-53

Crop: **Notified Onion**

Popular For Kharif Season | Bulb Having Flattish Round Shape, Moderately Pungent Test

Bulb Having Attractive Red Colour,

Ready To Harvest In 90-100 Days After Transplanting.

TSS is 11-12 %

Excellent Quality Of Fruit

High Market Rate

Remik Kasturi

Crop: **Research Onion**

Sowing period June to November

Fruit having flate globe shape with 5-6 cm diameter

Fruit having attractive red colour, shiny skin uniform size with good keeping quality

Maturity period 80-100 days after Transplanting

High yield, good marketability

Good for long distance and high yielding

Remik Salado

Crop: **Research Onion**

Fruit size: 100-110 Gm

Bulb shape: globe

Maturity : 110-115 days after transplanting

Color : yellow color

Season : Kharif And Rabi

High yielding variety

Good Storage ability

Tight Skin, Thin Neck

Remik Snow White

Crop: **Research Onion**

Days To Maturity : 90-110 Days After TPL

Bulb Shape : Round

Bulb Color : White

Bulb Weight : 100-110 gm

Season : Kharif

Remark : Bulb Tight Skin With 13-14 % TSS

High yield, good marketability

OKRA

Remik Silky

Crop: **Hybrid Okra**

Fruit type: Attractive dark green with uniform ridges on fruit

Fruit quality: tender, soft, thin and long

Fruit length: 8-10 cm

Fruit weight: 70-80 gm

First picking start: 45-55 days

Tolerance to YVMV, CLCV & Powdery mildew

Remik Fresh Finger

Crop: **Hybrid Okra**

Fruit Color: Dark Green

Fruit Length: 12-14 Cms

Maturity: 45-50 Days After Sowing

Specialties: High Yield Short Internode Distance, Tolerant To YVMV Virus, 5 Lobed Fruit Strong & Medium Tall Plant.

Remik Kalki

Crop: **Hybrid Okra**

Fruit Colour: Lustrous green

Fruit Diameter: 1.3 to 1.5 cm

Lobes per Fruit: 5

Branches per Plant: 1 to 2

Plant Habit: Vigorous and erect

First Harvest: 44 to 48 DAS

Tolerant to YVMV, ELCV and OLCV

Remik Red Finger

Crop: **Hybrid Okra**

Fruit type: Attractive healthy red fruit with uniform ridges on fruit

Fruit quality: tender, soft, thin and long

Fruit length: 8-10 cm

Short internodal length

First picking start: 45-55 days

Tolerance to YVMV, CLCV & Powdery mildew

High Yielding Variety

CLUSTER BEAN

Remik Makhamali

Crop: **Research Cluster Bean**

Plant bearing fruits from at the base of plant

Plants type erect single stem with dark foliage

Fruits are tender, soft, shiny & smooth

cluster bearing having 14-15 pod

First picking start from 40-45 days

Continue flush with high yield

Remik Extensive Green

Crop: **Research Cluster Bean**

First Picking: 32 – 35 days first harvest

Fruit color: Attractive Green

Plant habit: Cluster

Fruit Size: 13 – 17 cm

Yield: Very High

Fruit shape : Long and soft

Remik Clever Cooch

Crop: **Research Cluster Bean**

First Picking: 40 – 45 days first harvest

Fruit color: Green

Fruit Size: 11 – 13 cm

Continue flush with high yield

Yield: Very High

Fruit shape : Long and soft

Remik Fairy Stick

Crop: **Research Moringa**

Days of first fruit harvest: 6 Month days of sowing

Fruit Skin Colour: Attractive Dark Green

Fruit Skin Colour intensity: Medium

Skin hardness of Fruit: smooth And extra super

Fruit Shape: long and stright

Fruit Length: 40 – 50 cm

CORN

Remik Ras Malai

Crop: **Hybrid Sweet Corn**

Medium tall plant are vigorous with dark green broad leaves

Average cob weight 300-450 gm, Uniform cob size with good tip filling

Cob placement in middle of plant

Cob are covered with fully husk

Grain are tender soft with sweet milky juicy

Rabbit ear leaf on tip of ear head Average

Maturity days 75-80 days depend on season

Suitable for kharif and Rabi season.

Remik Chatter Patter

Crop: **Hybrid Sweet Corn**

Plant Type: Vigorous

Cob length: 19-20 cm | Kernal Rows : 16-18

Cob Colour : Yellow

Cob Weight : 350-450 gm

Dekernelling : Easy

Maturity Days : 70-80 DAS

TSS % : 12-15 %

Special Features: i) High yield with more high quality cobs & forage

Remik Pop Up

Crop: **Hybrid Corn**

Medium Size Yellow Orange Hard Flint Cornel,

Plant Height 170-200 Cm

Maturity Days 85-95 Days

Excellent Popping Quality

Tolerance To Leaf Blight And Major Disease

Special Features: High yielding hybrid with excellent fruit quality

Ear Uniformity: Good

Early Maturity, High Yielding Variety

Remik Itty-Bitty

Crop: **Hybrid Baby Corn**

Plant Height : 200-210 cm

Ear Height: 130-140 cm

Ear/Plant: 3 to 4

Ear Colour: Yellow

Ear Uniformity: Good

Maturity Days: 40-45 DAS

Detasseling: Not Required

Tolerance to powdery mildew disease

BOTTLE GOURD

Remik Mukta

Crop: **Hybrid Bottle Gourd**

Vine having vigorous growth with big leaves

Fruit shapes are cylindrical uniform bottle shape

Fruit weight 600-800 gm at marketable stage

Fruit length 30-45 cm

Fruit skin colour is attractive light green

First picking start from 50-55 days

Tolerance to CMV virus and powdery mildew disease

Remik Baby Bottel

Crop: **Hybrid Bottle Gourd**

First Picking: 50-55 days first harvest

Fruit color: attractive Green

Fruit Shap: Cylinder

Fruit Size: 25-30 cm

Fruit weight: 300 - 400

Tolerance to CMV virus and powdery mildew disease

Uniform fruit size

Remik B-Spot

Crop: **Hybrid Bottle Gourd**

Dark green with spotted appearance

Size - 30 to 40 cms long

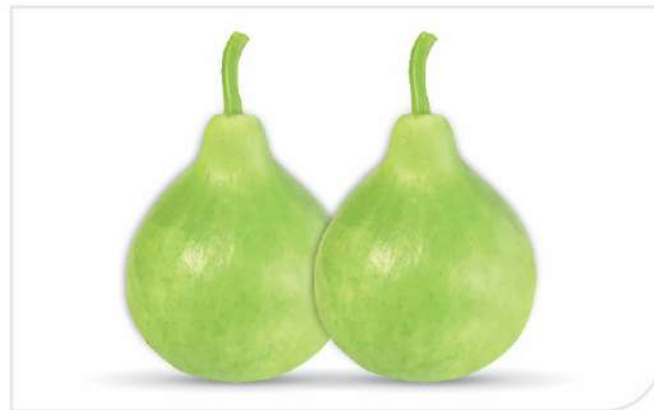

Shape Type - Gada/Balloon

Disease tolerant

Uniform fruit size

High yielder Fruit Weight - 2 to 2.5 Kgs

Maturity - 45 to 50 days.

Remik Lattu Boy

Crop: **Hybrid Bottle Gourd**

Vine having vigorous growth with big leaves

Fruit shapes are bulb uniform bulb shape

Fruit weight 600-800 gm at marketable stage

Fruit skin colour is attractive light green

First picking start from 50-55 days

Tolerance to CMV virus and powdery mildew disease

Crop maturity days -110-120 days

RIDGE GOURD

Remik Urmila

Crop: **Hybrid Ridge Gourd**

Fruit length 30-45 cm | Fruit diameter 3-4 cm

Fruit weight 90-120 gm

Fruit flesh soft tender, straight white colour

Fruit having uniform ridge with attractive green colour

First harvesting start from 50-60 days

Maturity days 110-120 days

Tolerance to CMV virus and powdery mildew disease

Remik Albella

Crop: **Hybrid Ridge Gourd**

Fruit Length (cm): 20-25

Fruit Shape: Short slender

Fruit Colour: Matty green Avg.

Fruit weight (gm) :150-180

Season/Sowing time Kharif: Jun-July, Rabi: Jan-March

Early maturity with excellent fruit setting Uniform cylindrical short fruit

Remik Jivika

Crop: **Hybrid Ridge Gourd**

Fruit Colour: Attractive lustrous green

Fruit length: 35-40 cm

Fruit Weight: 200-230 gm

First Harvest: 50-55 days after transplanting

Fruit shape: Medium long with deep ridges.

Remik Divine God

Crop: **Hybrid Ridge Gourd**

Days To First Picking: 50-55 Days After Sowing

Fruit Color : Dark Green

Fruit Length: 30-35 cm

Average Fruit Weight: 160-180 gm

Remark: Long Medium Thin

SPONGE GOURD

Remik Arpita

Crop: **Hybrid Sponge Gourd**

Very vigorous plant with prolific bearing

Straight attractive glossy thin | Long green fruit

Fruit length 20-25 cm

First harvesting start from 50-60 days

Maturity days 110-120 days

High yield in appropriate condition

Good field tolerance to CMV virus and powdery mildew disease

Remik Glossy Green

Crop: **Hybrid Sponge Gourd**

Hybrid with early harvesting ability .

Fruit: Dark green, Cylindrical medium long, Average weight 120-130gm.

More number of fruits per plant .

Highly uniform fruits.

First harvesting start from 55-60 day

Good field tolerance to CMV virus and powdery mildew disease

High yield in appropriate condition

Remik Goodies

Crop: **Hybrid Sponge Gourd**

Fruit Shape: Cylindrical

Fruit Weight : 130-180 g

Fruit Colour: Greenish White

Fruit Length: 30-40 cm

Days of 1st Picking: 40-45 DAS

Special Features: High yielding with excellent fruit quality

Remik Chikni

Crop: **Hybrid Sponge Gourd**

Days To First Picking : 50-55 Days After Sowing

Fruit Color : Green

Fruit Length: 18-22 cm

Fruit Weight : 100-120 gm

High yield

More number of fruits per plant

WITH THE GOODNESS OF
CUCUMBER

CUCUMBER

Remik Muskan

Crop: **Research Cucumber**

Days of first fruit harvest : 42 - 45 days of sowing

Fruit Skin Colour: Attractive Dark Green with Yellow strips

Skin hardness of Fruit : smooth

Fruit Test: Smooth and Testy

Fruit Length: 28 -35 cm

Early variety

Fruiting start from 45 days

Remik Makhkhan

Crop: **Research Cucumber**

Days of first fruit harvest: 42 - 45 days of sowing

Fruit Skin Colour: Attractive Dark Green

Skin hardness of Fruit: Smooth

Fruit Test: Smooth and Testy

Fruit Length: 28 -35 cm

Early variety

Fruiting start from 45 days

Remik Fresh slice

Crop: **Hybrid Cucumber**

Days Of First Fruit Harvest : 42 - 45 Days Of Sowing

Fruit Colour : Mottled Green To Dark Green

Fruit Shape: Cylindrical

Skin Hardness Of Fruit : Smooth

Crispy Solid Flesh & Bitter Free

Fruit Length – 15-20 Cm | Fruit Weight – 160 – 180 Gm

Plant Vigor: Vigorous

Good For Long Distance And High Yielding

Remik Healthy Bite

Crop: **Hybrid Cucumber**

Fruit color: Green to mottled Green Fruit

Shape: Cylindrical

Fruit length: 18-22 cm

Plant vigor: Vigorous

Avg. fruit wt: 100-120 gm

Special features : Crispy solid flesh, Bitter free.

good for long distance.

Higher Yield

Remik Chibhda

Crop: **Research Cucumber**

Days of first fruit harvest: 45 - 50 days of sowing

Fruit Skin Colour: Dark Green And Yellow strip

Fruit Skin Colour intensity: Medium

Skin hardness of Fruit: Smooth And extra super

Fruit Shape: short and bottle type

Fruit Length: 12 - 15 cm

Remik Crunchy Cut

Crop: **Research Cucumber**

Days of first fruit harvest: 40 - 45 days of sowing

Fruit Colour: Whitish Green

Skin hardness of Fruit: Smooth

Crispy solid flesh & bitter free

Fruit Length: 40 - 45 cm

Good for disease and heat tolerance

Remik Celina

Crop: **Hybrid Tinda**

Fruit shape: Small & Round

Fruit skin colour: Light Green to green

Fruit Flesh: White Soft Tender and testy

Average fruit weight 60-70 gm

First Harvest start: 45-50 days

Seed doesn't become hard even if harvest delay of 2-3 days

Remik Satvik

Crop: **Hybrid Tinda**

Fruit Shape: Round

Fruit Colour : Green

Fruit Weight: 70-75 gm

Maturity: 38-40 days

Highly vigorous vines with high yielder

Early variety with uniform fruit size with high yield potential.

BITTER GOURD

Remik Miraj

Crop: Hybrid Bitter Gourd

Strong vines with uniform vigorous growth
Fruit length 7-8 cm with 3-4 cm diameter
Medium fruit tothing with tender flesh
Fruit weight 60-90 gm at marketable stage
Fruit colour attractive green
First picking start from 50-60 days
Tolerance to CMV virus and powdery mildew disease

Remik Kaju

Crop: Hybrid Bitter Gourd

Strong vines with uniform vigorous growth
Fruits are small in size
Fruit length 4-5 cm with 2-3 cm diameter
Medium fruit tothing with tender flesh
Fruit weight 30-50 gm at marketable stage
Fruit colour attractive green
First picking start from 50-60 days

Remik Green Long

Crop: Hybrid Bitter Gourd

Strong vines with uniform vigorous growth
Fruits shape thick long
Fruit length 28-30 cm with 3-4 cm diameter
Medium fruit tothing with tender flesh
Straight cylindrical long fruit with profuse bearing
Fruit colour attractive green to dark green
First picking start from 50-60 days
Tolerance to CMV virus and powdery mildew disease

Remik Bitter Boy

Crop: Hybrid Bitter Gourd

Hybrid type: Long Spindle hybrids
Relative days to maturity
Fruit shape: Spindle
Fruit length (cm): 25-30
Fruit weight: 150-200 gm
Fruit colour: Dark green
Remarks: Smooth tothing , Glossy, very good yielde
Tolerance to CMV virus and powdery mildew disease

MUSK MELON

Remik Anthem

Crop: **Hybrid Musk Melon**

Fruit size: 1.25-1.5 kg

Fruit shape: oval

Netting on fruit: Good

Seed cavity: Small

Flesh colour: Deep salmon

Flesh texture: Good And very Tight | Long self

Early and excellent yielder

Remik Sweet Surprise

Crop: **Research Musk Melon**

Plant vigor: High | Foliage color: Dark green

Fruit Color: Greenish Grey

Fruit Size : 850 gm -1000 gm | Fruit Shape : Round

Fruit Surface : Netted | Days to Maturity : 55-60 days

Fruit Cavity: Small to Medium | Fruit Flesh quality : Deep Orange

Major USP's : Strong plant with high fruiting and uniform fruit shape.

Crispy taste and medium cavity, High temp tolerance.
Good shipping quality

Remik Jelly Bean

Crop: **Research Musk Melon**

Netting on fruit slightly netting with dark green ribs

Harvesting start in 60-65 days

Fruit shape flattish round

Orange flesh is very crispy fragrant

Average fruit weight: 700-1000 gm

High yield, attractive fruit

Tolerance to CMV virus and powdery mildew disease

Remik Sakar

Crop: **Research Musk Melon**

Fruit having musky flavour and aroma with

Harvesting start in 60-65 days

Fruit shape flattish round

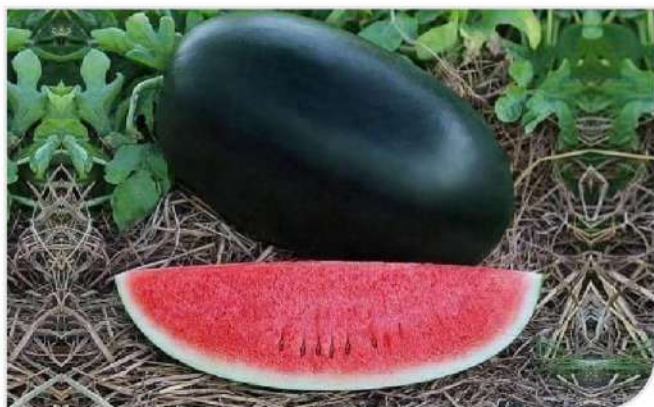

Fruit flesh is Greenish Yellow

Average fruit weight: 700-1000 gm

Special Features: High yielding hybrid with excellent fruit quality high

WATER MELON

Remik Shivling

Crop: **Hybrid Water Melon**

Early and High yielding variety | Fruit shape: oblong

Sugar content around 12-14 TSS

Fruit having good keeping quality

Thick skin and good for transportation

Fruit weight : 4-5 kg

Ripen fruit colour: Blackish Green | Fruit surface: semi wrinkle,

Flesh are Pinkish red with crispy

Tolerance WMCV

Remik Pinky Sweet

Crop: **Hybrid Water Melon**

Wine is vigour, Medium spreading vine

Early and High yielding variety | Fruit shape: oblong

Sugar content around 12-14 TSS

Fruit having good keeping quality

Thick skin and good for transportation

Fruit weight : 4-5 kg

Ripen fruit colour: dark green with tiger stripes

Tolerance WMCV

Remik Melting Scoop

Crop: **Hybrid Water Melon**

Fruit Colour: Black

Shape: Round

Fruit weight: 2-3kg

Flesh color: Dark red

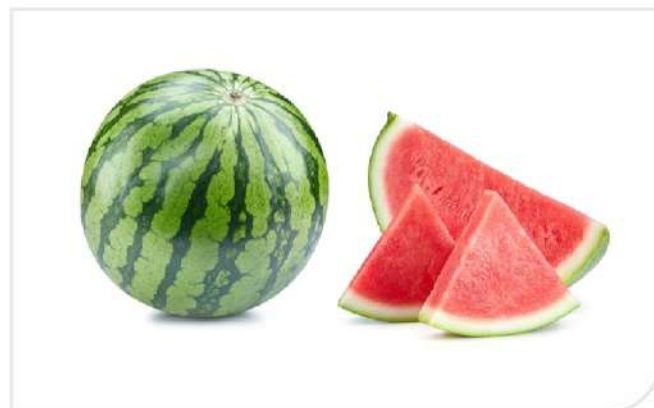

Brix Sweetness: 12

Sowing to harvest: 80 days

Stable quality

Sugar content around 12TSS

Tolerance WMCV

Remik Sweet Bowl

Crop: **Hybrid Water Melon**

Fruit Colour: Green Striped

Shape: Round

Fruit weight: 2.3 kg

Flesh color: Pinkish Red

Brix Sweetness: 12

Sowing to harvest: 80 days

Stable quality

Sugar content around 12TSS

Tolerance WMCV

PUMPKIN

Remik Herobite

Crop: Hybrid Pumpkin
Fruit shape: Flatted Round
Fruit colour: Green with White dots
Flesh colour: Yellowish cream
Fruit weight: 3-5 kg
Excellent Fruit set
High Yield due to higher vine longevity
Maturity Days: 80-90 Days after sowing

Remik Veg God

Crop: Hybrid Pumpkin
Fruit Shape: Flatted Round
Fruit Colour: Yellow Orange
Flesh Colour: Yellowish Cream
Fruit Weight : 700 Gm- 1250 Gm
Excellent Fruit Set
High Yield Due To Higher Vine Longevity
Maturity Days: 80-90 Days After Sowing

Remik Adhistan

Crop: Hybrid Pumpkin
Days To Maturity 75-80 Days After Sowing
Fruit Shape: Oblong To Long
Fruit Color: Green With White Dots
Fruit Weight 6-8 kg
Remark: Very Early
High Yield due to higher vine longevity

Remik Healing Pump

Crop: Hybrid Pumpkin
Attractive Dark Green mottle fruit colour
Round flate fruit shape
High yield potential
First Harvest : 70-80 Days
Seed Quantity Per Acre- 0.7-0.8 Kgs
Disease Tolearance : Mild PM/LCV□Fruit Weight : 4-6 Kgs

**SPINY GOURD
COCO MELONE**

Remik Appu

Crop: **Hybrid Ash Gourd**

Days To First Harvest : 80-110 Days

Fruit Color: Green

Fruit Shape: Square Round

Fruit Length: 20-25 Cm

Fruit Width: 20-22 Cm

Fruit Weight: 8-10 Kg

Remark: Attractive Fruit Shape, good Storage Capacity

Remik Snaky Bite

Crop: **Hybrid Snake Gourd**

Days to First picking: 60-65 days After Sowing

Fruit Color: milky white

Fruit length: 35-40 cm

Fruit diameter: 4-5cm

Average Fruit Weight: 100-150 gm

Remark: Vigorous growing

Remik Karingda

Crop: **Research Coco Melone**

Vine are vigorous

Fruit weight: 50-70 gm

Fruit shape: Oblong shape with yellow

Fruit Quality: Testy with good self life

Fruit colour: Green with Yellow strip like baby water melon

Suitable for Kharif and summer season

It can be grow any soil

Remik Vitapure

Crop: **Research Spiny Gourd**

Vine are thin and spreading which will grow on wire or trellis

It has small leaves, small yellow flowers,

it has small, attractive dark green with smooth small spine, round or oval fruits.

It is dioecious, which means that it has distinct male and female individual organisms,

Fruit harvesting time is when fruit are green tender and soft

It is resistant to all major disease and pest

**SPINACH
FENUGREEK**

Remik Lavish Green

Crop: **Research Spinach**

Days to First Picking: 35– 40 days after sowing.

Peeking Quality : Good

Leaves: Broad leaves and lush green

Yields: Very High

Test: Very Sweet

Trasportation: Goods for long distance shipping

Remik Tandurasti

Crop: **Research Spinach**

Fast growing, plant are vigorous, Green plant with extensive leaves

Leaves are big broad, juicy and tender soft with high nutritive value

The leaves are alternate, simple, ovate to triangular

Harvesting start after 30-35 day after sowing

Multiple cut with delay or slow bolting variety.

2-3 good cutting after sowing

Remik Kesar

Crop: **Research Kesar**

Fast growing, vigorous green plant

Plant with extensive branching with leaves consisting of three small obovate to oblong leaflets.

Dual purpose for green vegetable and seed purpose

Seed are bold attractive yellowish colour

Moderately resistant to root rot and tolerant to powdery mildew.

Leaves are rich in protein, minerals and vitamin c

It take 120-130 days to seed maturity.

Remik Wide Leaf

Crop: **Research Fenugreek**

Days to First Picking: 45– 50 days after sowing.

Color: Dark green

Perfect for both green vegetable and crop

Peeking Quality: Good

Leaves: Broad leaves and lush green

Yields: Very High

Plant with extensive branching with leaves consisting of three small obovate to oblong leaflets.

**CORIANDER
AMARANTHUS**

Remik Aroma

Crop: **Research Coriander**

The plant is a thin stemmed, small, bushy herb, 25 to 50 cm in height with many branches and umbels.

Leaves are alternate, compound.

The whole plant has a pleasant aroma.

Inflorescence is a compound umbel comprises 5 smaller umbels.

Profuse early growth with multiple cutting

Delay or slow bolting variety

Seed are small round with split.

Suitable for round the year sowing

Remik Zaika

Crop: **Research Coriander**

First Harvest: 40 To 45 Days

Leaf Colour: Dark Green Colour

Leaf Shape : Round And Big Shape

Plant Height : 30 To 35 Cm.

Speciality Company Research Variety Good For Green Vegetable

Profuse early growth with multiple cutting

Delay or slow bolting variety

The whole plant has a pleasant aroma

Remik Jyoti

Crop: **Research Amaranthus**

Days to First Picking : 55-60 Days after Sowing

Mature plant Colour : Attractive Dark Green Big Leaves

Peeking Quality : Good

Yields : Very High

Early variety with multiple cutting

Remik Pixie Leaf

Stage: **Research Amaranthus**

Days to First Picking : 55-60 Days after Sowing

Mature plant Colour : Attractive Dark purple Big Leaves

Peeking Quality : Good

Yields : Very High

Early variety with multiple cutting

COW PEA

Remik Simran

Crop: **Research Cow Pea**

Plant are non viny to semi viny with profuse foliage

This variety having tolerance to mosaic virus

Pods are tender soft with green colour

Pods length having 20-24 cm long with cylindrical shape at marketable stage

First picking start from 50-60 days after sowing

Crop maturity period 85-90 days

Remik Pixie Pick

Crop: **Research Pixie Pick**

Plant Are Non Viny To Semi Viny With Profuse Foliage

This Variety Having Tolerance To Mosaic Virus pods Are Tender Soft With Dark Green Colour

Pods Length Having 20-22 Cm Long

First Picking Start From 45-50 Days After Sowing

Early Maturity

Best For Green Vegetable Purpose

Remik Grain Spoon

Crop: **Research Cow Pea**

Strong, semi viny growth with dense foliage and big leaves.

2-3 pods per inflorescence.

Cylindrical-medium long and shiny light green in color.

First picking within 55-60 days.

High yield potential.

Sowing Time: Kharif: June-August and Summer: January-February.

Remik MLA

Crop: **Research Cow Pea**

Both summer and rainy season crop

Grow for green pods, dry seeds and fodder

Seeds rich in protein 23-28 %.

This variety having tolerance to mosaic virus

First picking start from 50-60 days after sowing

Crop maturity period 85-90 days

BEANS

Remik Vardan

Crop: **Research Beans**

First picking start from 45 -50 days

Pod are 6-7 cm long and 10-12 per inflorescence

Pods are greenish white colored with long cylindrical shape

Plants are erect, non viny with profuse branching

Flowers are attractive white colored

Continues flowering and flush in appropriate management practices

Remik Mr. Bean

Crop: **Research Beans**

Strong, dwarf bushy growth habit, dense foliage and large leaves.

Plant height 80-90cm, pods long, flat, smooth, sweet, fiber less attractive shiny dark green.

Marketable size pods on an average 10-12cm long and 2-3cm broad.

First picking at 50-55 days after sowing

Special Features: High yielding hybrid with excellent fruit quality

Remik Surti

Crop: **Research Beans**

Sowing Time: July To December

Plants are straight, bushy and strong

Fruits are medium in size, averaging 2-5 cm in length, and are long, flat, and slightly curved in shape.

The pods are smooth, thick, and pale green, tapering to a point on both ends.

Remik Surti contain iron, magnesium, and calcium.

Remik Booster

Crop: **Pole Beans**

High yielding, white seeded it's outstanding,

Small leaf variety, adapted to lowland & high land conditions

Height of the plant 6 - 7 feet

Pods are slender semi round, stringless, light green in colour &

length of fruit 16 - 18cms First picking start from 45 - 50 days after sowing

Tolerance to fusarium wilt, Bean Common Mosaic virus

BEANS

Remik Beans Bro

Crop: **White Kidney Beans**

Dwarf & bushy plants with

concentrated fruiting

Moderately resistant to bean

High yield

Pods 9-10 cm long

Maturity : 80-90 day

Both fresh & dry purpose

Remik Red Raj

Crop: **Red Kidney Beans**

Flat, green straight pods.

Seeds light brown, oblong and large.

Seed yield min 1400—1500 kg./ha,

Duration 70-75 days.

Tolerance to Powdery mildew

High yielding Variety

Remik Y 2 B

Crop: **Research Beans**

Plant Type : Vigorous growing plants. Widely adaptable and high yielding pods having good shelf-life

Pod Length : 70 to 75 cm

Fruit Color : Light Green

Harvesting : 45-50 days after sowing

Sowing Period: Kharif (May to June), Rabi (Oct to Nov), summer (Dec to Jan).

Remik Bliss Berry

Crop: **Broad Beans**

Maturity : Medium Early

Plant Height : 90 cm

Seed size : Medium large

Seed Per Pod : 7

Tolerance to Powdery mildew

High yielding Variety

PEA
FRENCH BEAN

Remik Harabhara

Crop: **Research Pea**

Pod Shape : Pencil Type | Plant Height : 2-3 Feet

Maturity : 60-70 Days

More No Of Pods Per Plant

7-8 Medium Size Peas Per Pods

Attractive Dark Green Pods

Fruite Quality : Tender And Sweetest

Disease Tolerance

Remik Mendal Path

Crop: **Research Pea**

Sowing Time: November To February

Maturity : 60 Days

Pod Length: 5-6 cm

Plant Height: 40-50cm

Attractive Light Green Pods

Fruite Quality : Freezer Type

Plant Types : Wrinkled

Remik Lady Green

Crop: **Research French Bean**

Plants bushy, vigorous and photo-insensitive.

Pods are green, stringless with smooth surface fleshy, crisp, medium long.

More number of pods per plant

Suitable for both rabi and summer.

Resistant to MYMV disease.

Early maturity with high yield

Remik Curry Lover

Crop: **Research French Bean**

Plant: Bushy

Days To Maturity: First Picking 45-50 Days

Pod Color: Dark Green Pod.

Pod Length: 12-15 cm Pencil Type

Grain Color: Small White Seed.

Early maturity with high yield

**PIGEON PEA
SOYABEAN**

Remik Approve

Crop: **Research Pigeon Pea**

Suitable for Mix, Solo or inter cropping pattern

Early maturity start bearing at early stage

Suitable for dual purpose i.e. vegetable or Pulses

Open plant type, Intermediate growth with excellent branch formation

Every Pod bears whitish brown colored bold grain

Tolerance to wilt disease

Remik Shahi Bhog

Crop: **Research Soyabean**

Days to Maturity : 90-95 days

Plant Height : 30-40 cm

Seed Bold size Yellowish colour

Tolerant to Soya Rust

Early Maturity, High Yielding Variety

Tolerance to wilt disease

Remik Hot Stick

Crop: **Research Radhish Pod**

Radish pods, Mogro, Mungori (Raphanus sativus)

Health as with mooli, mogri is also very low in food energy and high in vitamin c

Soil: lighy deep soil with plenty of organic matter.

Propagation: From seed, Sow 1-2 cm deep in rich soil and give it plenty of light and warmth. it will be ready to harvest in 2-3 months.

Open plant type, Intermediate growth Tolerance to wilt diesaese

Remik Leafy Deal

Stage: **Research Dill Seeds**

More number of branch and umbels per plant

Leaves are aromatic with high oil percent

Higher foliage yield due to vigorous vegetable growth.

Dark green colour of foliage,

Due to late flowering it can better utilized for vegetable purpose

A surreal landscape where several large, white radishes are partially submerged in a blue liquid. The radishes have green leafy tops. In the center, the word "RADISH" is written in bold red letters. In the background, a tiny person wearing a blue outfit and a white hat is standing in the liquid, holding a basket. The scene is lit with a bright, ethereal light, creating a dreamlike atmosphere. The bottom right corner features a green and white wavy graphic element.

RADISH

Remik Chandani

Crop: **Research Radish**

Early maturity: 45-50 days after sowing

Fruit: shape are whitish spherical soft straight uniform with long pointed shape

Fruit weight 300-400 gm with 30-40 cm long

Fruit having medium pungency with long self life

Delay or slow fiber formation in fruit

Suitable for winter season when temperature range 20-35 degree

Remik White Sky

Crop: **Hybrid Radish**

Days To Maturity : 40-45 Days From Sowing

Type Of Leaves : Chetki Type

Root Shape : Cylindrical

Root Length : 40-45 cm

Root Color : White Root

Tolerance to Root Rot & Powdery mildew

Remik Snow Red

Crop: **Research Radish**

Early maturity: 45-50 days after sowing

Excellent plant structure with serrated slightly pungent leaves

Roots are pink in colour, semi blunt end

Fruit weight 120-130 gm with 25-30 cm long

Fruit having medium pungency with long self life

Delay or slow fiber formation in fruit

Suitable for winter season when temperature range 20-35 degree.

Remik Red Joy

Crop: **Research Radish**

Days To Maturity : 45-50 Days From Sowing

Type Of Leaves : Chetki Type

Root Shape : Cylindrical (Mildly Pungent)

Root Length : 25-30 cm

Root Color : Red Root

Core : Core Less

Tolerance to Root Rot & Powdery mildew

CARROT

Remik Moody Red

Crop: **Research Carrot**

Sowing in rabi season

Fruit colour are orange red colour

Fruit are long and tapering

Root shape at shoulder: flat to round

Root tip: Slightly pointed

Tolerance to high temperature

Excellent quality of fruit | High market rate

More suitable in sandy soil

Colour of core: Orange red

Remik Smooth Shot

Crop: **Research Carrot**

Colour: Attractive Orange

Shape: Uniform short smooth,

Length: 14-16 cm,

Maturity: 100-105 days,

High yielding, vigorous growing, Kuroda type hybrid.

Tolerance to Root Rot & Powdery mildew

Remik Kalam

Crop: **Research Carrot**

Sowing in rabi season

Fruit colour are deep red colour

Fruit are long and tapering

Root shape at shoulder: flat to round

Root tip: Slightly pointed

Tolerance to high temperature

Excellent quality of fruit | High market rate

More suitable in sandy soil

Colour of core: yellowish Orange

Remik Orange Barrel

Crop: **Research Carrot**

Days To Maturity : 100-110 Days

Root Shape : Cylindrical

Root Length : 18-20 cm

Root Color : Orange

Core : Core Less

Excellent quality of fruit

High market rate

BEET

Remik Red

Crop: **Hybrid Beet**

Maturity Days: 50-55 days after sowing

Fruit weight: 120 -150 gm

Fruit are tender soft round shape with deep red colour

On maturity if fruit are not harvested it will grow up to 450 gm without cracking or losing colour and test.

Fruit fiber development are delay

Suitable season is rabi season

Remik Clever Cut

Crop: **Hybrid Beet**

Maturity: 50 to 55 days after sowing

Root Shape: Round

Root Colour: Blood Red

Fruit Av.Wt.: 80-100 gm

Remarks: FHC 30 days without cracking, Cripsy,

Sweet taste, less fibre. Colour remains same, Pan India Product.

Ruby Queen

Crop: **Research Beet**

Rounded red roots

Ringless smooth buttery texture

Does well in poor soil conditions

Good for processing

Ready in 60 Days

Tolerance to Root Rot & Powdery mildew

Suitable season is rabi season

Remik Love Ball

Crop: **Hybrid Beet**

Root Shape – Round

Exterior Color – Scarlet Red

Interior Color – Whitelative

Maturity – Early, 24 Days

Top Height - Medium Short

Excellent quality of fruit

High market rate

**SUNFLOWER
MARIGOLD**

Remik Subharambh

Crop: **Hybrid Marigold**

Flower: Yellow color

Flower size: 8-10 cm

Plant height: 60-75 CM

First picking 60-70 days after planting

High yielding variety and good keeping

Season summer & Rainy Good keeping quality

Remik Celebration

Crop: **Hybrid Marigold**

Days to First Picking : 40 – 50 days after transplanting

Flower weight : 7 – 8 gram

Mature Fruit Colour : Attractive Dark Orange lower with firm texture

Picking Quality : Good with good self life

Yields : Very High

Transportation: Goods for long distance shipping

Remik Orna

Crop: **Hybrid Marigold**

Days to first harvest: 50-55 DAT

Plant height : 70-75 cm

Habit: Bushy | Flower colour: Golden yellow

Flower shape: Ball

Flower diameter: 7-8 cm

Flower firmness: Firm

Avg flower weight: 18-20 gm

Special features High yield, good marketability and suitable for long distance shipping

Remik Sun Grace

Crop: **Hybrid Sunflower**

Plants are medium tall, Robust growth

Flower: Head Medium, Convex, Semi erect, uniform, and Completely filled up to the centre seed setting very attractive & good eye appeal.

Flower Size : 25-30 Cm Diameter

Flower weight: 700 to 800 gram Mature

Days To Harvest : Widely adopted, medium duration 95- 105 days

Tolerance to YMV, CLCV & Powdery mildew

High yield, good marketability

BROCKOLI
CHINES CABBAGE

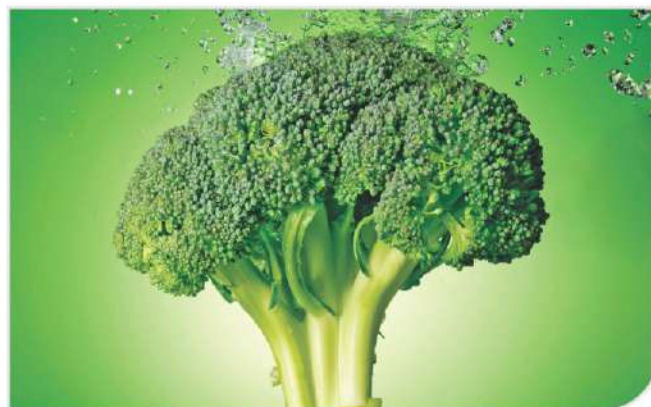

Remik Red 4 U

Crop: Hybrid Cabbage
Days To Maturity: 140
Plant Habit: Small
Head Shape: Coconut Shape
Head Colour: Dark Red
Avg. Head Weight: 1-1.5/ Kg
Compactness: Compact
Very High nutritional value.
Uniform crop with attractive color

Remik Milano

Crop: Hybrid Knolkhol
Plant Habit : Semi - Vigorous
Fruit Shape : Semi- Globular
Fruit Colour : Light Green
Fruit Weight : 200 - 250 gm Maturity : 40 DAT
Season : August - September
Special Features : (i) High quality uniform (ii) Produce with less foliage and good average weigh
Exotic Vegetable

Remik Be Cool

Crop: Hybrid Brockoli
Days of maturity 55-60 Days
Plant habit: Erect
Leaf color: Bluish Green
Head shape: Roundish
Head color: Deep Green
Av.Head Weight: 250-450 gm
Good side shoot production after the central head is harvested
Good for shipping and strong tolerance to diseases

Remik Chill Out

Crop: Research Leek
Long, thick white stalk, and a slightly bulbous root with mild flavour
Maturity days 85-90 day after TP
Broad, flat, tightly wrapped, dark green leaves on top and creamy white bottom
Exotic vegetable
Excelent in test
High nutrient valu

**KALE
CELERY**

Remik Detoxic

Crop: **Research Lettuce**

Seed Colour: White

Maturity: Medium early

Head Size: Medium

Leaf Colour: Light green

Exotic vegetable

Excelent in test

Higher vitamins

Remik Grow Green

Crop: **Research Kale**

Harvest In day – 80-90 day

PLANT HEIGHT : Grows Up To 1.5 Feet High

FLOWER SHAPE : Fringed, Ruffled Leaves

Leaf type: blistered

Color: Green Curled Leaves With No Head

Specifications: edible leaves, suitable for salad dressings, Smoothies Etc

Remik Bellyfit

Crop: **Research Celery**

Fruit Colour: Dark Green

Plant Height: 60- 70

Maturity: 130 days

Leaves are oblong, 7-18 cm.

long, pinnate or trifoliate. Stems are branched, angular, jointed and light green in colour.

The flowers are white or greenish white, very small on sessile compound umbels.

Remik Citadel

Crop: **Research Parsely**

Maturity: 75 days

Leaf Type : straight | Colour : dark green

Exotic vegetable

Excelent in test

Leaves are triangular in outline, consisting of three-lobed cuneate lobes.

Umbels are lax, and flowers have yellow, inflexed at the apex, petals.

**ZUCCHINI
TURNIP**

Remik Bana

Crop: **Hybrid Zucchini**

Cylindrical Dark Green Fruit

Sowing Time : April To June

Plant Character : Vining Plant With Vigorous Fruiting In Summer

Fruit Character : Short Pale Green Fruit With Heavier Bottom

Harvest : 45 To 50 After Sowing

Remik Goldy

Crop: **Hybrid Zucchini**

Sowing Time: February To March

Plants: Vigorous Veins

Fruit Size: 100-150 Gms

Fruit Shape: Round

Fruit Color: Shinning Green

Days To Maturity: 45-50 Days After Sowing

Remik Milky Pure

Crop: **Hybrid Turnip**

Root Color: White

Sowing Time: February To April

Root Shape: Oval-shaped Root Tubers

Days To Maturity: 140 To 160 Days After

Plant Type: Climbing Legume Vines

Early Maturity, High Yielding variety

Remik Purpel Tikka

Crop: **Hybrid Turnip**

Root Shape : Oval Round

Root Color: Half Purple From Top And Bottom Half White

Flesh: White, Sweet And Crispy

Harvest: After 40-50 Days

Specification: Roots Are Eaten Raw, Pickled And Cooked.

Sowing Time: July To September (or As Per Your Local Climatic Conditions).

अच्छे बीज, अच्छे दिन
